

Hindi Vidya Prachar Samiti's

**Ramniranjan Jhunjhunwala College**

of

**Arts, Science & Commerce**

**(Autonomous College)**

Affiliated to

**UNIVERSITY OF MUMBAI**

Syllabus for the F.Y.B.Sc.

**Program: B.Sc. INFORMATION TECHNOLOGY**

**Program Code: RJSUIT**

*(CBCS 2018-19)*

**DISTRIBUTION OF TOPICS AND CREDITS****F.Y. B.Sc. INFORMATION TECHNOLOGY SEMESTER I**

<b>Course</b>	<b>Nomenclature</b>	<b>Credits</b>	<b>Topics</b>
RJSUIT101	Imperative Programming	2	1. Basic Programming Concepts 2. Arrays, Pointers and Structures
RJSUIT102	Digital Electronics	2	1. Numbering system and Boolean Algebra 2. Sequential and combinational Logic
RJSUIT103	Operating Systems	2	1. Basic OS concepts 2. Virtualization and Cloud
RJSUIT104	Discrete Mathematics	2	1. Set Theory, Number theory and related concepts 2. Graphs, Trees and Probability
RJSUIT105	Communication Skills	2	1. Business Communication 2. Soft Skills and Communication Needs
RJSUIT1P1	Imperative Programming Practical	2	
RJSUIT1P2	Digital Electronics Practical	2	
RJSUIT1P3	Operating Systems Practical	2	
RJSUIT1P4	Discrete Mathematics Practical	2	
RJSUIT1P5	Communication Skills Practical	2	

**F.Y. B.Sc. INFORMATION TECHNOLOGY SEMESTER II**

<b>Course</b>	<b>Nomenclature</b>	<b>Credits</b>	<b>Topics</b>
RJSUIT201	Object Oriented Programming	2	1. Object Oriented Principles 2. Exception Handling, Templates and File Handling
RJSUIT202	Microprocessor Architecture	2	1. 8-bit Microprocessor architecture and Assembly Language 2. Next Generation Microprocessors
RJSUIT203	Web Programming	2	1. Internet and WWW 2. HTML, PHP, JavaScript and MySQL
RJSUIT204	Numerical and Statistical Methods	2	1. Mathematical Modeling and Engineering Problem Solving 2. Regression, Linear Programming and Random Variables
RJSUIT205	Green Computing	2	1. Issues and Minimizing Power usage 2. Going Paperless, Recycling and Greening
RJSUIT2P1	Object Oriented Programming Practical	2	
RJSUIT2P2	Microprocessor Architecture Practical	2	
RJSUIT2P3	Web Programming Practical	2	
RJSUIT2P4	Numerical and Statistical Methods Practical	2	
RJSUIT2P5	Green Computing Practical	2	

<b>Course Name: Imperative Programming</b>		<b>Course Code:RJSUIT101</b>	
<b>Periods per week(1Period is 50 minutes)</b>		<b>5</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Theory Examination</b>	<b>2</b>	<b>60</b>
	<b>Internal</b>	<b>--</b>	<b>40</b>

<b>Unit</b>	<b>Details</b>	<b>Lectures</b>
<b>I</b>	<p><b>Introduction:</b> Types of Programming languages, History, features and application. Simple program logic, program development cycle, pseudo code statement sand flowchart symbols, sentinel value to end a program, programming and user environments, evolution of programming models., desirable program characteristics.</p> <p><b>Fundamentals:</b> Structure of a program. Compilation and Execution of a Program, Character Set, identifiers and keywords, data types, constants, variables and arrays, declarations, expressions, statements, Variable definition, symbolic constants.</p>	<b>12</b>
<b>II</b>	<p><b>Operators and Expressions:</b> Arithmetic operators, unary operators, relational and logical operators, assignment operators, assignment operators, the, library functions.</p> <p><b>Data Input and output:</b> Single character input and output, entering input data, scanf function, printf function, gets and puts functions, interactive programming.</p>	<b>12</b>

<b>III</b>	<b>Conditional Statements and Loops:</b> Decision Making Within A Program, Conditions, Relational Operators, Logical Connectives, If Statement, If-Else Statement, Loops: While Loop, Do While, For Loop. Nested Loops, Infinite Loops, Switch Statement <b>Functions:</b> Overview, defining a function, accessing a function, passing arguments to a function, specifying argument data types, function prototypes, recursion, modular programming and functions, standard library of c functions, prototype of a function: formal parameter list, return type, function call, block structure, passing arguments to a function: call by reference, call by value.	<b>12</b>
<b>IV</b>	<b>Program structure:</b> Storage classes, automatic variables , external variables, static variables, multifile programs, more library functions, <b>Preprocessor:</b> Features , #define and #include, Directives and Macros <b>Arrays:</b> Definition, processing, passing arrays to functions, multidimensional arrays, arrays and strings.	<b>12</b>
<b>V</b>	<b>Pointers:</b> Fundamentals, declarations, Pointer Type Declaration, Pointer Initialization, Pointer Arithmetic, Functions and Pointers, Arrays And Pointers, Pointer Arrays, passing functions to other functions <b>Structures and Unions:</b> Structure Variables, Initialization, Structure Assignment, Nested Structure, Structures and Functions, Structures <b>Arrays:</b> Arrays of Structures, Structures Containing Arrays, Unions, Structures and pointers.	<b>12</b>

	<b>Internal</b>	<b>--</b>	<b>--</b>

<b>List of Practicals</b>	
<b>1.</b>	<b>Basic Programs:</b>
a)	Write a program to declare some variables of type int, float and double. Assign some values to these variables, type cast them and display these values.
b)	Write a program to use different types of operators.
<b>2.</b>	<b>Programs on variables</b>
a)	Write a program to swap two numbers with and without using third variable.
b)	Write a program to find the area of rectangle, square and circle. Also find the volume of a cube, sphere, and cylinder.
<b>3.</b>	<b>Conditional statements and loops(basic)</b>
a)	Write a program to check whether the number is even or odd. Also check whether the number is positive, negative or zero.
b)	Write a program to find the factorial of a number.
c)	Write a program to find the largest of three numbers.(Note:- Use conditional operator).
d)	Write a program to enter a number from the user and display the month name. If Number >13 then display invalid input using switch case.
e)	Write a program to check whether the entered number is prime or not.
<b>4.</b>	<b>Conditional statements and loops(advanced)</b>
a)	Write a program to find the sum of squares of digits of a number.
b)	Write a program to check whether the entered number is Armstrong or not.
c)	Write a programs to print the Fibonacci series.
d)	Write a program to find the reverse of a number.
e)	Write a program to find whether a given number is palindrome or not.
f)	Write a program that solve the quadratic equation: $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$
g)	Write a program to count the digit in a number
h)	Write a program to simulate simple calculator that performs arithmetic operations.
<b>5.</b>	<b>Programs on patterns:</b>
a)	Programs on different patterns.
<b>6.</b>	<b>Functions:</b>
a)	Programs on Functions.
<b>7.</b>	<b>Recursive functions</b>

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

a)	Write a program to find the factorial of a number using recursive function.
b)	Write a program to find the sum of natural number using recursive function.
<b>8.</b>	<b>Arrays</b>
a)	Write a program to find the largest value that is stored in the array.
b)	Write a program using pointers to compute the sum of all elements stored in an array.
c)	Write a program to arrange the 'n' numbers stored in the array in ascending and descending order.
d)	Write a program that performs addition and subtraction of matrices.
e)	Write a program that performs multiplication of matrices.
<b>9.</b>	<b>Pointers</b>
a)	Write a program to demonstrate the use of pointers.
b)	Write a program to perform addition and subtraction of two pointer variables.
<b>10.</b>	<b>Structures and Unions</b>
a)	Programs on structures.
b)	Programs on unions.

F.Y. BSc I.T.	Semester I Theory
RJSUIT101	Course Outcomes :
<b>Imperative</b>	The Course will enable the student

<p><b>Programming</b></p>	<p>To understand the knowledge on need of programming languages and problem solving techniques.</p> <ol style="list-style-type: none"> <li>1. To develop programming skills using the fundamentals and basics of C Language.</li> <li>2. To effectively use arrays, structures, functions, pointers.</li> <li>3. To develop logics this will help them to create programs, applications in C.</li> </ol> <p>Learning outcomes:</p> <ul style="list-style-type: none"> <li>➤ After the completion of this course, the students will be able to develop programs and small applications.</li> </ul>
<p>RJSUIT1P1</p> <p><b>Imperative Programming Practical</b></p>	<p>Course Outcomes :</p> <ol style="list-style-type: none"> <li>1. Problem solving using standard programming techniques and Turbo C compiler.</li> </ol>

<b>B.Sc.(Information Technology)</b>		<b>Semester-I</b>	
<b>Course Name: Digital Electronics</b>		<b>Course Code: RJSUIT102</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>5</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Theory Examination</b>	<b>2</b>	<b>60</b>
	<b>Internal</b>	<b>--</b>	<b>40</b>

<b>Unit</b>	<b>Details</b>	<b>Lectures</b>
<b>I</b>	<p><b>Number System:</b> Analog System, digital system, numbering system, binary number system, octal number system, hexadecimal number system, conversion from one number system to another, floating point numbers, weighted codes binary coded decimal, non-weighted codes Excess-3 code, Gray code, Alphanumeric codes-ASCII Code, EBCDIC, Error detection and correction, Universal Product Code, Code conversion.</p> <p><b>Binary Arithmetic:</b> Binary addition, Binary subtraction, Negative number representation, Subtraction using 1's complement and 2's complement Binary multiplication and division, BCD and Excess-3 arithmetic.</p>	<b>12</b>
<b>II</b>	<p><b>Boolean Algebra and Logic Gates:</b> Introduction, Logic(AND OR NOT), Boolean theorems, Boolean Laws, De Morgan's Theorem, Perfect Induction, Reduction of Logic expression using Boolean Algebra, Deriving Boolean expression from given circuit, exclusive OR and Exclusive NOR gates, Universal Logic gates, Implementation of other gates using universal gates, Input bubbled logic, Assertion level.</p> <p><b>Minterm, Maxterm and Karnaugh Maps:</b> Introduction, minterms and sum of minterm form, maxterm and Product of maxterm form, Reduction technique using Karnaugh maps-2/3/4/5/6 variable K-maps, Grouping of variables in K-maps, K-maps for product of sum form, minimize Boolean expression using K-map and obtain K-map from Boolean expression, Quine Mc Cluskey Method.</p>	<b>12</b>

<b>III</b>	<p><b>Combinational Logic Circuits:</b> Introduction, Multi-input, multi-output Combinational circuits, Code converters design and implementations</p> <p><b>Arithmetic Circuits:</b> Introduction, Adder, BCD Adder, Excess-3 Adder, Binary Subtractors, BCD Subtractor, Multiplier, Comparator.</p>	<b>12</b>
<b>IV</b>	<p><b>Multiplexer, Demultiplexer, ALU, Encoder and Decoder:</b> Introduction, Multiplexer, Demultiplexer, Decoder, ALU, Encoders.</p> <p><b>Sequential Circuits: Flip-Flop:</b> Introduction, Terminologies used, S-R flip-flop, D flip-flop, J K flip-flop, Race-around condition, Master-slave JK flip-flop, T flip-flop, Conversion from one type of flip-flop to another, Application of flip-flops.</p>	<b>12</b>
<b>V</b>	<p><b>Counters:</b> Introduction, Asynchronous counter, Terms related to counters, IC7493 (4-bit binary counter), Synchronous counter, Bushing, Type T Design, Type JK Design, Preset table counter, IC7490, IC7492, Synchronous counter ICs, Analysis of counter circuits.</p> <p><b>Shift Register:</b> Introduction, parallel and shift registers, serial shifting, serial-in serial-out, serial-in parallel-out, parallel-in parallel-out, Ring counter, Johnson counter, Applications of shift registers, Pseudo-random binary sequence generator, IC7495, Seven Segment displays, analysis of shift counters.</p>	<b>12</b>

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

3.	Digital Principles and Applications	Malvino and Leach	Tata McGraw Hill		
4.	Digital Electronics: Principles, Devices and Applications	Anil K. Maini	Wiley		2007

<b>B.Sc.(Information Technology)</b>		<b>Semester-I</b>	
<b>Course Name: Digital Electronics Practical</b>		<b>Course Code:RJSUIT1P2</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>3</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Practical Examination</b>	<b>2½</b>	<b>50</b>
	<b>Internal</b>	<b>--</b>	<b>--</b>

<b>List of Practical</b>	
<b>1.</b>	<b>Study of Logic gates and their ICs and universal gates:</b>
a.	Study of AND, OR, NOT, XOR, XNOR, NAND and NOR gates
b.	IC7400, 7402, 7404, 7408,7432, 7486, 74266
c.	Implement AND, OR, NOT, XOR, XNOR using NAND gates.
d.	Implement AND, OR, NOT, XOR, XNOR using NOR gates.
<b>2.</b>	<b>Implement the given Boolean expressions using minimum number of gates.</b>
a.	Verifying De Morgan's laws.
b.	Implement other given expressions using minimum number of gates.
c.	Implement other given expressions using minimum number of ICs.
<b>3.</b>	<b>Implement combinational circuits.</b>
a.	Design and implement combinational circuit based on the problem given and minimizing using K-maps.
<b>4.</b>	<b>Implement code converters.</b>
a.	Design and implement Binary-to-Gray code converter.

b.	Design and implement Gray-to-Binary code converter.
c.	Design and implement Binary-to-BCD code converter
d.	Design and implement Binary – to-XS-3codeconverter
<b>5.</b>	<b>Implement Adder and Subtractor Arithmetic circuits.</b>
a.	Design and implement Half adder and Full adder.
b.	Design and implement BCD adder.
c.	Design and implement XS-3 adder.
d.	Design and implement binary subtractor.
e.	Design and implement BCD subtractor.
f.	Design and implement XS-3 subtractor.
<b>6.</b>	<b>Implement Arithmetic circuits.</b>
a.	Design and implement a 2-bit by 2-bit multiplier.
b.	Design and implement a 2- bit comparator.
<b>7.</b>	<b>Implement Encode and Decoder and Multiplexer and Demultiplexers.</b>
a.	Design and implement 8:3 encoder.
b.	Design and implement 3:8 decoder.
c.	Design and implement 4:1 multiplexer. Study of IC 74153, 74157
d.	Design and implement 1:4 demultiplexer. Study of IC 74139
e.	Implement the given expression using IC 74151 8:1 multiplexer.
f.	Implement the given expression using IC 74138 3:8 decoder.
<b>8.</b>	<b>Study of flip-flops and counters.</b>
a.	Study of IC 7473.
b.	Study of IC 7474.
c.	Study of IC 7476.
d.	Conversion of Flip-flops.
e.	Design of 3-bit synchronous counter using 7473 and required gates.
f.	Design of 3-bit ripple counter using IC 7473.
<b>9.</b>	<b>Study of counter ICs and designing Mod-N counters.</b>
a.	Study of IC7490, 7492, 7493 and designing mod-n counters using these.
b.	Designing mod-n counters using IC 7473 and7400 (NAND gates)
<b>10.</b>	<b>Design of shift registers and shift register counters.</b>
a.	Design serial – in serial – out, serial – in parallel–out, parallel–in serial–out, parallel – in parallel – out and bidirectional shift registers using IC7474.
b.	Study of ID 7495.
c.	Implementation of digits using seven segment displays.

F.Y. BSc I.T.	Semester I Theory
RJSUIT102 <b>Digital Electronics</b>	<p>Course Outcomes :</p> <ol style="list-style-type: none"><li>1. To understand and implement the concepts in Boolean algebra and design logic circuits based on these concepts.</li><li>2. Implement the sequential and combinational logic circuits to build applications</li></ol> <p>Learning outcomes:</p> <ul style="list-style-type: none"><li>➤ After completion of this course, students will be able to build small digital circuits, like the ALU, multiplexers and shift registers.</li><li>➤ They can understand formation of complex designs like microcontrollers based on the basic logic circuits.</li></ul>
RJSUIT1P2	<p>Course Outcomes :</p> <ol style="list-style-type: none"><li>1. Study of logic gates, their IC's and universal gates.</li></ol>

<b>Digital Electronics Practical</b>	<ol style="list-style-type: none"> <li>2. Formulate and employ a Karnaugh Map to reduce Boolean expressions and logic circuits to their simplest forms.</li> <li>3. Design and implement combinational logic circuits using reprogrammable logic devices for Binary Arithmetic.</li> <li>4. Interfacing with the Analog World: Multiplexing, Demultiplexing, Encoder and decoder.</li> <li>5. Implementing sequential Circuits: Latches, Clock Signals and Clocked Flip-Flops.</li> </ol>

The subject demonstrates the importance of the discrete mathematical topics in applied science.</li></ol> <p>Learning outcomes:</p> <p>Students will be able to:</p> <ul style="list-style-type: none"><li>➤ Understand the basic principles of sets and operations in sets.</li><li>➤ Apply counting principles to determine probabilities.</li><li>➤ Demonstrate an understanding of relations and functions and will be able to determine their properties.</li><li>➤ Model problems in Computer Science using graphs and trees.</li></ul>

RJSUIT1P4	Course Outcomes :
<b>Discrete Mathematics Practical</b>	<ol style="list-style-type: none"> <li>1. Installation of the software Scilab. Basic syntax, Mathematical Operators, Predefined constants, Built in functions</li> <li>2. Complex numbers, Polynomials, Vectors, Matrix. Handling these data structures using built in functions</li> <li>3. Programming - Functions - Loops - Conditional statements - Handling .sci files</li> </ol>

<b>B.Sc.(Information Technology)</b>		<b>Semester-I</b>

RJSUIT1P5 <b>Communication Skills Practical</b>	<p>Course Outcomes :</p> <ol style="list-style-type: none"> <li>1. To improve overall communication skill ability towards empathy, friendliness and professionalism in speaking and attitude.</li> <li>2. To infuse healthy feeling of completion and positive behaviour and collaborative efforts in solving problems</li> </ol>

<b>B.Sc.(Information Technology)</b>		<b>Semester-II</b>	
<b>Course Name: Object Oriented Programming</b>		<b>Course Code: RJSUIT201</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>5</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Theory Examination</b>	<b>2</b>	<b>60</b>
	<b>Internal</b>	<b>--</b>	<b>40</b>

<b>Unit</b>	<b>Details</b>	<b>Lectures</b>
-------------	----------------	-----------------

<b>I</b>	<b>Object Oriented Methodology:</b> Introduction, Advantages and Disadvantages of Procedure Oriented Languages, what is Object Oriented? What is Object Oriented Development? Object Oriented Themes, Benefits and Application of OOPS. <b>Principles of OOPS:</b> OOPS Paradigm, Basic Concepts of OOPS: Objects, Classes, Data Abstraction and Data Encapsulation, Inheritance, Polymorphism, Dynamic Binding, Message Passing	<b>12</b>
<b>II</b>	<b>Classes and Objects:</b> Simple classes (Class specification, class members accessing), Defining member functions, passing object as an argument, Returning object from functions, friend classes, Pointer to object, Array of pointer to object. <b>Constructors and Destructors:</b> Introduction, Default Constructor, Parameterized Constructor and examples, Destructors	<b>12</b>
<b>III</b>	<b>Polymorphism:</b> Concept of function overloading, overloaded operators, overloading unary and binary operators, overloading comparison operator, overloading arithmetic assignment operator, Data Conversion between objects and basic types, <b>Virtual Functions:</b> Introduction and need, Pure Virtual Functions, Static Functions, this Pointer, abstract classes, virtual destructors.	<b>12</b>
<b>IV</b>	<b>Program development using Inheritance:</b> Introduction, understanding inheritance, Advantages provided by inheritance, choosing the access specifier, Derived class declaration, derived class constructors, class hierarchies, multiple inheritance, multilevel inheritance, containership, hybrid inheritance. <b>Exception Handling:</b> Introduction, Exception Handling Mechanism, Concept of throw & catch with example	<b>12</b>

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

<b>V</b>	<p><b>Templates:</b> Introduction, Function Template and examples, Class Template and examples.</p> <p><b>Working with Files:</b> Introduction, File Operations, Various File Modes, File Pointer and their Manipulation</p>	<b>12</b>
----------	--	-----------

<b>B.Sc.(Information Technology)</b>		<b>Semester-II</b>	
<b>Course Name: Object Oriented Programming Practical</b>		<b>Course Code: RJSUIT2P1</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>3</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Practical Examination</b>	<b>2½</b>	<b>50</b>
	<b>Internal</b>	<b>--</b>	<b>--</b>

<b>List of Practical: To be implemented using object oriented language</b>	
<b>1.</b>	<b>Classes and methods</b>

a.	Design an employee class for reading and displaying the employee information, the getInfo() and displayInfo() methods will be used respectively. Where getInfo() will be private method
b.	Design the class student containing getData() and displayData() as two of its methods which will be used for reading and displaying the student information respectively. Where getData() will be private method.
c.	Design the class Demo which will contain the following methods: readNo(), factorial() for calculating the factorial of a number, reverseNo() will reverse the given number, is Palindrome() will check the given number is palindrome, isArmstrong() which will calculate the given number is arm Strong or not. Where readNo() will be private method.
d.	Write a program to demonstrate function definition outside class and accessing class members in function definition.
<b>2. Using friend functions.</b>	
a.	Write a friend function for adding the two complex numbers, using a single class
b.	Write a friend function for adding the two different distances and display its sum, using two classes.
c.	Write a friend function for adding the two matrix from two different classes and display its sum.
<b>3. Constructors and method overloading.</b>	
a.	Design a class Complex for adding the two complex numbers and also show the use of constructor.
b.	Design a class Geometry containing the methods area() and volume() and also overload the area()function.
c.	Design a class Static Demo to show the implementation of static variable and static function.
<b>4. Operator Overloading</b>	
a.	Overload the operator unary(-)for demonstrating operator overloading.
b.	Overload the operator+ for adding the timings of two clocks, And also pass objects as an argument.
c.	Overload the + for concatenating the two strings. For e.g "Py"+"thon"= Python
<b>5. Inheritance</b>	
a.	Design a class for single level inheritance using public and private type derivation.
b.	Design a class for multiple inheritance.
c.	Implement the hierarchical inheritance.
<b>6. Virtual functions and abstract classes</b>	
a.	Implement the concept of method overriding.
b.	Show the use of virtual function
c.	Show the implementation of abstract class.
<b>7. String handling</b>	
a.	String operations for string length, string concatenation

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

b.	String operations for string reverse, string comparison,
c.	Console formatting functions.
<b>8.</b>	<b>Exception handling</b>
a.	Show the implementation of exception handling
b.	Show the implementation for exception handling for strings
c.	Show the implementation of exception handling for using the pointers.
<b>9.</b>	<b>File handling</b>
a.	Design a class File Demo open a file in read mode and display the total number of words and lines in the file.
b.	Design a class to handle multiple files and file operations
c.	Design an editor for appending and editing the files
<b>10.</b>	<b>Templates</b>
a.	Show the implementation for the following
b.	Show the implementation of template class library for swap function.
c.	Design the template class library for sorting ascending to descending and vice-versa

F.Y. BSc I.T.	Semester II Theory
RJSUIT201	Course Outcomes :
<b>Object Oriented Programming</b>	<ol style="list-style-type: none"> <li>1. This course introduces and studies about basic C++ language syntax and semantics to write C++ programs and use concepts such as variables, conditional and iterative execution methods</li> </ol>

	<p>etc.</p> <p>2. Understand the fundamentals of object-oriented programming, including defining classes, objects, invoking methods and exception handling mechanisms, the principles of inheritance, packages and interfaces.</p> <p>Learning outcomes:</p> <ul style="list-style-type: none"> <li>➤ The model of object oriented programming using abstract data types, encapsulation, inheritance and polymorphism</li> <li>➤ Use Fundamental features of an object oriented language like C++: object classes and interfaces, exceptions.</li> <li>➤ Solving business problem using suitable logic through coding.</li> </ul>
<p>RJSUIT2P1</p> <p><b>Object Oriented Programming Practical</b></p>	<p>Course Outcomes :</p> <p>1. Implementation of object oriented programming concepts in C++ using Turbo C.</p>

<b>B.Sc.(Information Technology)</b>		<b>Semester-II</b>	
<b>Course Name: Microprocessor Architecture Practical</b>		<b>CourseCode:RJSUIT2P2</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>3</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Practical Examination</b>	<b>2½</b>	<b>50</b>
	<b>Internal</b>	<b>--</b>	<b>--</b>

<b>List of Practical</b>	
<b>1.</b>	<b>Perform the following Operations related to memory locations.</b>
a.	Store the data byte 32 H into memory location 8000H.
b.	A block of data consisting of 256 bytes is stored in memory starting at 8000H. write an assembly language program to shift this block in memory from 8050H onwards.
c.	Exchange the contents of memory locations 8000H and 9000H
d.	Add 2 arrays having ten 8-bit numbers each and generate a third array of result. It is necessary to add the first element of array 1 with the first element of array-2 and so on. The starting addresses of array 1, array2 and array3 are 8200H, 8300H and 8400H, respectively
<b>2.</b>	<b>Simple assembly language programs for arithmetic operations.</b>
a.	Add two 8 bit numbers
b.	Subtract the contents of memory location 8001H from the memory location 8000H. Hand place the result in memory location 8002H.
c.	Add the 16-bit number in memory locations 8000H and 8001H to the 16-bit number in memory locations 8002H and 8003H. The most significant eight bits of the two numbers to be added are in memory locations 8001H and 8003H. Store the result in memory locations 8004H and 8005H with the most significant byte in memory location 8005H.
d.	Subtract the 16-bit number in memory locations 8002H and 8003H from the 16-bit number in memory locations 8000H and 8001H. The most significant eight bits of the two numbers are in memory locations 8001H and 8003H. Store the result in memory locations 8004H and 8005H with the most significant byte in memory location 8005H.
e.	Find the 1's complement of the number stored at memory location 8400H and store the complemented number at memory location 8300H.
f.	Find the 2's complement of the number stored at memory location 8200H and store the complemented number at memory location 8300H.
<b>3.</b>	<b>Packing and unpacking operations.</b>
a.	Write a simple program to Split a HEX data into two nibbles and store it in memory
b.	Pack the two unpacked BCD numbers stored in memory locations 8200H and 8201H and store result in memory location 8300H. Assume the least significant digit is stored at 8200H.

c.	Two digit BCD number is stored in memory location 8200H. Unpack the BCD number and store the two digits in memory locations 8300H and 8301H such that memory location 8300H will have lower BCD digit.
<b>4.</b>	<b>Register Operations.</b>
a.	Write a program to shift an eight bit data four bits right. Assume that data is in register C.
b.	Program to shift a16-bit data1bit left. Assume data is in the HL register pair
c.	Write a program to count number of 1's in the contents of D register and store the count in the B register.
<b>5.</b>	<b>Operations with Memory locations.</b>
a.	Calculate the sum of series of numbers. The length of the series is in memory location 8200H and the series begins from memory location 8201H. a. Consider the sum to be 8 bit number. So, ignore carries. Store the sum at memory location 8300H. b. Consider the sum to be 16 bit number. Store the sum at memory locations 8300H and 8301H
b.	Calculate the sum of series of even numbers from the list of numbers. The length of the list is in memory location 8200H and the series itself begins from memory location 8201H. Assume the sum to be 8 bit number so you can ignore carries and store the sum at memory location 8000 H
c.	Multiply two8-bit numbers stored in memory locations 8200H and 8201H by repetitive addition and store the result in memory locations 8300H and 8301H.
d.	Divide 16 bit number stored in memory locations 8200H and 8201H by the 8 bit number stored at memory location 8202H. Store the quotient in memory locations 8300H and 8301H and remainder in memory locations 8302H and 8303H.
e.	Find the number of negative elements (most significant bit 1) in a block of data. The length of the block is in memory location 8200H and the block itself begins in memory location 8201H. Store the number of negative elements in memory location 8300H
f.	Find the square of the given numbers from memory location 8100H and store the result from memory location 9000H
<b>6.</b>	<b>Search and sort data with respect to memory locations.</b>
a.	Write a program to sort given 10 numbers from memory location 2200H in the ascending order.
b.	Search the given byte in the list of 50 numbers stored in the consecutive memory locations and store the address of memory location in the memory locations 8200H and 8201H. Assume byte is in the C register and starting address of the list is 8000H. If byte is not found store 00 at 8200H and 8201H

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

c.	Find the largest number in a block of data. The length of the block is in memory location 2200H and the block itself starts from memory location 2201H. Store the maximum number in memory location 2300H. Assume that the numbers in the block are all 8 bit unsigned binary numbers.
<b>7. Assembly programs on memory locations.</b>	
a.	Write an assembly language program to separate even numbers from the given list of 10 numbers and store them in the another list starting from 2300H. Assume starting address of 10 number list is 2200H
b.	Add even parity to a string of 7-bit ASCII characters. The length of the string is in memory location 2040H and the string itself begins in memory location 2041H. Place even parity in the most significant bit of each character.
c.	A list of 20 numbers is stored in memory, starting at 8000H. Find number of negative, zero and positive numbers from this list and store these results in memory locations 9000H, 9001H, and 9002H respectively
d.	Write an assembly language program to generate Fibonacci number.
e.	Program to calculate the factorial of a number between 0 to 8.
<b>8. String operations in assembly programs.</b>	
a.	Write an 8085 assembly language program to insert a string of four characters from the tenth location in the given array of 50 characters
b.	Write an 8085 assembly language program to delete a string of 4 characters from the tenth location in the given array of 50 characters.
<b>9. Subroutine</b>	
a.	DAA instruction is not present. Write a Sub routine which will perform the same task as DAA.
b.	Multiply two 8-bit numbers stored in memory locations 8200H and 8201H by repetitive addition and store the result in memory locations 8300H and 8301H. Write a subroutine to store the content of carry to register B.
c.	To test RAM by writing '1' and reading it back and later writing '0' (zero) and reading it back. RAM addresses to be checked are 40FFH to 40FFH. In case of any error, it is indicated by writing 01H at port 10
<b>10. Operations on BCD numbers.</b>	
a.	Add two 4 digit BCD numbers in HL and DE register pairs and store result in memory locations, 2300H and 2301H. Ignore carry after 16 bit.
b.	Subtract the BCD number stored in E register from the number stored in the D register
c.	Write an assembly language program to multiply 2 BCD numbers

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

d.	Two decimal numbers six digits each, are stored in BCD package form. Each number occupies a sequence of byte in the memory. The starting address of first number is 6000H Write an assembly language program that adds these two numbers and stores the sum in the same form at starting from memory location 6200H
----	---

F.Y. BSc I.T.	Semester II Theory
RJSUIT202  <b>Microprocessor Architecture</b>	Course Outcomes :  1. To study the architecture and assembly language for 8085 microprocessor.  2. Understand the functionality of new generation microprocessors.  Learning outcomes:  ➤ After this course students will be able to write assembly language program  ➤ Students will be able to design basic interface of hardware components such as memory devices
RJSUIT2P2  <b>Microprocessor Architecture Practical</b>	Course Outcomes :  1. Developing and implementing assembly language programs to perform arithmetic and logical operations  2. Perform various memory related operations with 8085 microprocessor.  3. Utilize internal register structure of 8085 microprocessor to perform various operations.

<b>Unit</b>	<b>Details</b>	<b>Lectures</b>
<b>I</b>	<p><b>Internet and the World Wide Web:</b>            What is Internet? Introduction to internet and its applications, E-mail, telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, internet address, World Wide Web (WWW): World Wide Web and its evolution, uniform resource locator (URL), browsers–internet explorer, Netscape navigator, opera, Firefox, chrome, Mozilla. Search engine, web saver–apache, IIS, proxy server, HTTP protocol</p> <p><b>HTML5:</b>            Introduction, Why HTML5? Formatting text by using tags, using lists and backgrounds, Creating hyperlinks and anchors. Style sheets, CSS formatting text using style sheets, formatting paragraphs using style sheets.</p>	<b>12</b>

<b>II</b>	<p><b>HTML5 Page layout and navigation:</b></p> <p>Creating navigational aids: planning site organization, creating text based navigation bar, creating graphics based navigation bar, creating graphical navigation bar, creating image map, redirecting to another URL, creating division based layouts: HTML5 semantic tags, creating divisions, creating HTML5 semantic layout, positioning and formatting divisions.</p> <p><b>HTML5 Tables, Forms and Media:</b></p> <p>Creating tables: creating simple table, specifying the size of the table, specifying the width of the column, merging table cells, using tables for page layout, formatting tables: applying table borders, applying background and foreground fills, changing cell padding, spacing and alignment, creating user forms: creating basic form, using checkboxes and option buttons, creating lists, additional input types in HTML5, Incorporating sound and video: audio and video in HTML5, HTML multimedia basics, embedding video clips, incorporating audio on web page.</p>	<b>12</b>
<b>III</b>	<p><b>JavaScript:</b> Introduction, Client-Side JavaScript, Server-Side JavaScript, JavaScript Objects, Java Script Security,</p> <p><b>Operators:</b> Assignment Operators, Comparison Operators, Arithmetic Operators, % (Modulus), ++(Increment), --(Decrement), -(Unary Negation), Logical Operators, Short-Circuit Evaluation, String Operators, Special Operators, ?: (Conditional operator), , (Comma operator), delete, new, this, void</p> <p><b>Statements:</b> Break, comment, continue, delete, do...while, export, for, for...in, function, if...else, import, labelled, return, switch, var, while, with,</p> <p><b>Core JavaScript (Properties and Methods of Each):</b> Array, Boolean, Date, Function, Math, Number, Object, String, RegExp</p> <p><b>Document and its associated objects:</b> document, Link, Area, Anchor, Image, Applet, Layer</p>	<b>12</b>

	<b>Events and Event Handlers:</b> General Information about Events, Defining Event Handlers, event, onAbort, onBlur, onChange, onClick, onDbClick, onDragDrop, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onMove, onReset, onResize, onSelect, onSubmit, onUnload	
<b>IV</b>	<b>PHP:</b> Why PHP and MySQL? Server-side scripting, PHP syntax and variables, comments, types, control structures, branching, looping, termination, functions, passing information with PHP, GET, POST, formatting form variables, super global arrays, strings and string functions, arrays, number handling, basic PHP errors/problems	<b>12</b>
<b>V</b>	<b>Advanced PHP and MySQL:</b> PHP/MySQL Functions, Integrating web forms and databases, Displaying queries in tables, Building Forms from queries, String and Regular Expressions, Sessions, Cookies and HTTP, E-Mail	<b>12</b>

<b>Books and References:</b>

2.	HTML5 Step by Step	Faith Wempen	Microsoft Press		2011
3.	PHP5.1 for Beginners	Ivan Bayross Sharanam Shah,	SPD		2013
4.	PHP Project for Beginners	Sharanam Shah, Vaishali Shah	SPD		2015
5.	PHP6 and MySQL Bible	Steve Suehring, Tim Converse, Joyce Park	Wiley		2009
6.	JavaScript 2.0: The Complete Reference	Thomas Powell and Fritz Schneider	Tata McGraw Hill	2 <sup>nd</sup>	

<b>B.Sc.(Information Technology)</b>		<b>Semester–II</b>	
<b>Course Name: Web Programming Practical</b>		<b>Course Code: RJSUIT2P3</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>3</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Practical Examination</b>	<b>2½</b>	<b>50</b>
	<b>Internal</b>	<b>--</b>	<b>--</b>

<b>List of Practical</b>	
<b>1.</b>	<b>Use of Basic Tags</b>
a.	Design a web page using different text formatting tags.
b.	Design a web page with links to different pages and allow navigation between web pages.
c.	Design a web page demonstrating all Style sheet types
<b>2.</b>	<b>Image maps, Tables, Forms and Media</b>
a.	Design a web page with Image maps.
b.	Design a web page demonstrating different semantics
c.	Design a web page with different tables. Design a web pages using table so that the content appears well placed.
d.	Design a web page with a form that uses all types of controls.
e.	Design a web page embedding with multimedia features.
<b>3.</b>	<b>JavaScript</b>
a.	Using JavaScript design, a web page that prints factorial/Fibonacci series/any given series.
b.	Design a form and validate all the controls placed on the form using JavaScript.
c.	Write a JavaScript program to display all the prime numbers between 1 and 100.
a.	Write a JavaScript program to accept a number from the user and display the sum of its digits.
d.	Write a program in Java Script to accept a sentence from the user and display the number of words in it. (Do not use split() function).
e.	Write a java script program to design simple calculator.
<b>4.</b>	<b>Control and looping statements and JavaScript references</b>
a.	Design a web page demonstrating different conditional statements.
b.	Design a web page demonstrating different looping statements.
c.	Design a web page demonstrating different Core JavaScript references (Array, Boolean, Date, Function, Math, Number, Object, String, regExp).
<b>5.</b>	<b>Basic PHP I</b>
a.	Write a PHP Program to accept a number from the user and print it factorial.

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

b.	Write a PHP program to accept a number from the user and print whether it is prime or not.
<b>6. Basic PHP II</b>	
a.	Write a PHP code to find the greater of 2 numbers. Accept the no. from the user.
b.	Write a PHP program to display the following Binary Pyramid: 1 0 1 1 0 1 0 1 0 1
<b>7. String Functions and arrays</b>	
a.	Write a PHP program to demonstrate different string functions.
b.	Write a PHP program to create one dimensional array.
<b>8. PHP and Database</b>	
a.	Write a PHP code to create:
b.	Write a PHP program to create a database named "College". Create a table
c.	Design a PHP page for authenticating a user.
<b>9. Email</b>	
a.	Write a program to send email with attachment.
<b>10. Session sand Cookies</b>	
a.	Write a program to demonstrate use of sessions and cookies.

F.Y. BSc I.T.	Semester II Theory
<p>RJSUIT203</p> <p><b>Web Programming</b></p>	<p>Course Outcomes :</p> <ul style="list-style-type: none"> <li>➤ To introduce students about various web programming language concepts and structures for writing programs.</li> <li>➤ Provide students with skills to solve problem with respect to web page design and development.</li> </ul> <p>Learning outcomes:</p> <ul style="list-style-type: none"> <li>➤ Understanding the major areas and challenges of web programming. Using advanced topics in HTML5, CSS3, JavaScript</li> <li>➤ Understanding server-side scripting language, PHP using a relational DBMS, MySQL</li> <li>➤ Designing and implementation of typical static web pages and interactive web applications .</li> </ul>
<p>RJSUIT2P3</p> <p><b>Web Programming Practical</b></p>	<p>Course Outcomes :</p> <ol style="list-style-type: none"> <li>1. Implementing web programming concept of HTML, javascript and php.</li> <li>2. To attain expertise in building web sites with advanced programming features.</li> </ol>

<b>Course Name: Numerical and Statistical Methods</b>		<b>Course Code: RJSUIT204</b>	
<b>Periods per week(1 Period is 50 minutes)</b>		<b>5</b>	
<b>Credits</b>		<b>2</b>	
		<b>Hours</b>	<b>Marks</b>
<b>Evaluation System</b>	<b>Theory Examination</b>	<b>2</b>	<b>60</b>
	<b>Internal</b>	<b>--</b>	<b>40</b>

<b>Unit</b>	<b>Details</b>	<b>Lectures</b>
<b>I</b>	<p><b>Mathematical Modeling and Engineering Problem Solving:</b> A Simple Mathematical Model, Conservation Laws and Engineering Problems</p> <p><b>Approximations and Round-Off Errors:</b> Significant Figures, Accuracy and Precision, Error Definitions, Round-Off Errors <b>Truncation Errors and the Taylor Series:</b></p> <p>The Taylor Series, Error Propagation, Total Numerical Errors, Formulation Errors and Data Uncertainty</p>	<b>12</b>
<b>II</b>	<p><b>Solutions of Algebraic and Transcendental Equations:</b> The Bisection Method, The Newton-Raphson Method, The Regula-falsi method, The Secant Method.</p> <p><b>Interpolation:</b> Forward Difference, Backward Difference, Newton's Forward Difference Interpolation, Newton's Backward Difference Interpolation, Lagrange's Interpolation.</p>	<b>12</b>
<b>III</b>	<p><b>Solution of simultaneous algebraic equations (linear) using iterative methods:</b> Gauss-Jordan Method, Gauss-Seidel Method.</p> <p><b>Numerical differentiation and Integration:</b> Numerical differentiation, Numerical integration using Trapezoidal Rule, Simpson's <math>1/3^{\text{rd}}</math> and <math>3/8^{\text{th}}</math> rules.</p> <p><b>Numerical solution of 1<sup>st</sup> and 2<sup>nd</sup> order differential equations:</b> Taylor series, Euler's Method, Modified Euler's Method, Runge-Kutta Method for 1<sup>st</sup> and 2<sup>nd</sup> Order Differential Equations.</p>	<b>12</b>

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

<b>IV</b>	<p><b>Least-Squares Regression:</b> Linear Regression, Polynomial Regression, Multiple Linear Regression, General Linear Least Squares, Non linear Regression</p> <p><b>Linear Programming:</b> Linear optimization problem, Formulation and Graphical solution, Basic solution and Feasible solution.</p>	<b>12</b>
<b>V</b>	<p><b>Random variables:</b> Discrete and Continuous random variables, Probability density function, Probability distribution of random variables, Expected value, Variance.</p> <p><b>Distributions:</b> Discrete distributions: Uniform, Binomial, Poisson, Bernoulli, Continuous distributions: uniform distributions, exponential, (derivation of mean and variance only and state other properties and discuss their applications) Normal distribution state all the properties and its applications.</p>	<b>12</b>

<b>List of Practical</b>	
<b>1.</b>	<b>Iterative Calculation</b>
a.	Program for iterative calculation.
b.	Program to calculate the roots of a quadratic equation using the formula.
c.	Program to evaluate using in finite series.
<b>2.</b>	<b>Solution of algebraic and transcendental equations:</b>
a.	Program to solve algebraic and transcendental equation by bisection method.
b.	Program to solve algebraic and transcendental equation by false position method.
c.	Program to solve algebraic and transcendental equation by Secant method.
d.	Program to solve algebraic and transcendental equation by Newton Raphson method.
<b>3.</b>	<b>Interpolation</b>
a.	Program for Newton's forward interpolation.
b.	Program for Newton's backward interpolation.
c.	Program for Lagrange's interpolation.
<b>4.</b>	<b>Solving linear system of equations by iterative methods</b>
a.	Program for solving linear system of equations using Gauss Jordan method.
b.	Program for solving linear system of equations using Gauss Seidel method.
<b>5.</b>	<b>Numerical Differentiation</b>
a.	Programing to obtain derivatives numerically.
<b>6.</b>	<b>Numerical Integration</b>
a.	Program for numerical integration using Trapezoidal rule.
b.	Program for numerical integration using Simpson's 1/3 <sup>rd</sup> rule.
c.	Program for numerical integration using Simpson's 3/8 <sup>th</sup> rule.
<b>7.</b>	<b>Solution of differential equations</b>
a.	Program to solve differential equation using Euler's method
b.	Program to solve differential equation using modified Euler's method.
c.	Program to solve differential equation using Runge-kutta 2 <sup>nd</sup> order and 4 <sup>th</sup> order methods.

<b>8.</b>	<b>Regression</b>
a.	Program for Linear regression.
b.	Program for Polynomial Regression.
c.	Program for multiple linear regression.
d.	Program for non-linear regression.
<b>9.</b>	<b>Random variables and distributions</b>
a.	Program to generate random variables.
b.	Program to fit binomial distribution.
c.	Program to fit Poisson distribution.
<b>10.</b>	<b>Distributions</b>
a.	Program for Uniform distribution.
b.	Program for Bernoulli distribution
c.	Program for Negative binomial distribution.

F.Y. BSc I.T.	Semester II Theory
RJSUIT204 <b>Numerical and Statistical Methods</b>	Course Outcomes : <ol style="list-style-type: none"><li>1. To learn basic modelling and engineering of problem solving</li><li>2. To learn essential statistical concepts like Regression and distribution.</li></ol> Learning outcomes: <ul style="list-style-type: none"><li>➤ After this course students will be able to solve mathematical problems using various approximations.</li></ul>
RJSUIT2P4 <b>Numerical and Statistical Methods Practical</b>	Course Outcomes : <ol style="list-style-type: none"><li>1. Implementation and application of numerical methods to solve complex engineering problems.</li><li>2. Use Scilab and programming as a tool in solving problems.</li></ol>

<b>B.Sc.(Information Technology)</b>		<b>Semester–II</b>	
<b>Course Name: Green Computing</b>		<b>Course Code: RJSUIT205</b>

**Scheme of Examinations**

**F.Y. B.Sc. INFORMATION TECHNOLOGY Syllabus Semester I & II**

1. Two Internals of 20 marks each. Duration 30 min for each.
2. One External (Semester End Examination) of 60 marks. Duration 2 hours.
3. Practical Examination for each subject at the end of Semester. Total five practical components, one each subject 50 marks each with separate passing out of 50
4. Minimum marks for passing Theory and Practical Exam is 40 %.
5. Student must appear for at least one of the two Internal Tests to be eligible for the Semester End Examination.
6. A candidate will be allowed to appear for the practical examinations if he/she submits a certified journal of F.Y. B.Sc. Information Technology or a certificate from the Head of the department / Institute to the effect that the candidate has completed the practical course of F.Y. B.Sc. Information Technology as per the minimum requirements.
7. In case of loss of journal, a candidate must produce a certificate from the Head of the department /Institute that the practicals for the academic year were completed by the student. However, such a candidate will be allowed to appear for the practical examination, but the marks allotted for the journal will not be granted.
8. Decision of the coordinator, in consultation with the Principal, shall remain final and abiding to all.
